

[26] User Cluster Role Binding

Configuring User API Authentication

- Create a new ClusterRole named `app-clusterrole`, which only allows to get, watch, list the following resource types: Deployment, Service
- Bind the new ClusterRole `app-clusterrole` to the new user `ckcuser`
- User ckauser and ckauser clusters are ready configured.
- To check the results, run the following command:
 - `kubectl config use-context ckauser`
- `curl https://k8s:6443/api/v1/namespaces/default/pods`: k8s

Role vs Cluster Role

集群角色(namespace) < 集群角色(cluster role) < 集群(namespace) < 集群角色(cluster role)

Reference

[docs](#) → `cluster role` → [Command-line utilities](#) → `kubectl create clusterrole`

[Using RBAC Authorization](#)

```
# Cluster Role □
[user@k8s-master ~]$ kubectl create clusterrole app-clusterrole --verb=get,list,watch --
resource=deployment,service
[user@k8s-master ~]$ kubectl get clusterrole app-clusterrole
[user@k8s-master ~]$ kubectl describe clusterrole app-clusterrole

# Cluster RoleBinding □
[user@k8s-master ~]$ kubectl create clusterrolebinding app-clusterrolebinding --clusterrole=app-clusterrole --
user=ckouser
[user@k8s-master ~]$ kubectl get clusterrolebinding app-clusterrolebinding
[user@k8s-master ~]$ kubectl describe clusterrolebinding app-clusterrolebinding

# □□□□
[user@k8s-master ~]$ kubectl config use-context ckouser

[user@k8s-master ~]$ kubectl get deployment
--> □□ □

[user@k8s-master ~]$ kubectl get services
--> □□ □

[user@k8s-master ~]$ kubectl get secret
--> □□ □
```

□□□ (37□)

Context You have been asked to create a new ClusterRole for a deployment pipeline and bind it to a specific ServiceAccount scoped to a specific namespace. Task Create a new ClusterRole named deployment-clusterrole, which only allows to create the following resource types:

- Deployment
- StatefulSet
- DaemonSet Create a new ServiceAccount named cicd-token in the existing namespace app-team1. Bind the new ClusterRole deployment-clusterrole to the new ServiceAccount cicd-token , limited to the namespace app-team1.
- □

```
kubectl create clusterrole deployment-clusterrole --resource=deployment,statefulset,daemonset --
verb=create
```

```
kubectl create serviceaccount cicd-token -n app-team1
```

```
kubectl create rolebinding deployment-rolebinding --clusterrole=deployment-clusterrole --  
serviceaccount=app-team1:cicd-token -n app-team1
```
