

[4] Multi-Container Pod

Multi-Container Pod

- Create pod
 -  : hk8s
 - Create a pod named lab004 with 3 containers running: nginx, redis, memcached

```
#   nginx   lab004  pod  --dry-run    yam   multi.yaml                                                                                                                                                                                                                                                                                                                                                                                                       
```

```
[user@console ~]$ kubectl get pods
```

```
lab004 0/3 ContainerCreating
```

```
# lab004 pod [ ] [ ] [ ] [ ] [ ] [ ] [ ]
```

```
[user@console ~]$ kubectl describe pod lab004
```
