Adding "default" plugin index from https://github.com/kubernetes-sigs/krew-index.git.
Updated the local copy of plugin index.
Installing plugin: krew
Installed plugin: krew
\
 | Use this plugin:
 | □kubectl krew
 | Documentation:
 | □https://krew.sigs.k8s.io/
 | Caveats:
 | \
 |  | krew is now installed! To start using kubectl plugins, you need to add
 |  | krew's installation directory to your PATH:
 |  |
 |  |   * macOS/Linux:
 |  |     - Add the following to your ~/.bashrc or ~/.zshrc:
 |  |         export PATH="${KREW_ROOT:-$HOME/.krew}/bin:$PATH"
 |  |     - Restart your shell.
 |  |
 |  |   * Windows: Add %USERPROFILE%\.krew\bin to your PATH environment variable
 |  |
```

```
 |  | To list krew commands and to get help, run:
 |  |   $ kubectl krew
 |  | For a full list of available plugins, run:
 |  |   $ kubectl krew search
 |  |
 |  | You can find documentation at
 |  |   https://krew.sigs.k8s.io/docs/user-guide/quickstart/.
 | /
/
```

KoPylot

An AI-powered assistant for Kubernetes

The blog: https://medium.com/@thiagoalves/introducing-kopylot-a-kubernetes-ai-assistant-264cff0e7846

The GitHub: https://github.com/avsthiago/kopylot

KoPylot features

At the current version, KoPylot has four main features. These features can be translated into subcommands for the `kopylot` CLI. The subcommands are **Audit**, **Chat**, **Ctl,** and **Diagnose**.

□□ Audit:

Audit resources, such as pods, deployments, and services. KoPylot will take a single resource and look for vulnerabilities based on its manifest file.

□□ Chat:

Ask KoPylot in plain English to generate kubectl commands. You will be able to review the command before running it □□.

□□ Diagnose:

You can use the diagnose tool to help you debug the different components of your application, such as pods, deployments, and services. The diagnose command will list for you possible fixes for the broken resource.

☸ Ctl:

A wrapper around kubectl. All the arguments passed to the `ctl` subcommand are interpreted by kubectl.
